

Dutton Gregory Solicitors

Dutton Gregory Solicitors, which has four offices based throughout Dorset and Hampshire, is another of the companies benefiting from our Cati compliance solution.

It deals with the needs of companies and private individuals UK-wide and we chat to Dan Then, its head of office and facilities.

He uses Cati's estate and people modules after originally hearing about it at an event run by the Institute of Workplace and Facilities Management – the body for workplace and facilities management professionals.

The estate module helps estates and property managers to ensure the highest levels of compliance in building certification, and the people module provides an online platform to manage employee competencies, training records, and vetting all in one place.

What compliance challenges were you facing that led you to use Cati?

I needed a way to keep track of all our legal FM compliance, along with other bespoke documentation for both buildings and staff.

How has Cati improved the way you work?

It has been absolutely brilliant. Not only am I able to see clearly where we are on a compliance level, I am also able to retain lots of other information - from insurance details to fire warden certificates. It also reminds me in plenty of time when these are due for renewal, so I can get this organised. I no longer feel I have hundreds of things I have to remember or keep on top of.

What is your opinion of Cati?

Cati's great and so is the support from the Cati team. They have made any changes I have asked for really easily and have always been willing to discuss my needs and see how they could make Cati work for me, rather than forcing me to alter my requirements to fit a system.

Anything else you would like to say about Cati?

If you're in an FM role or need to keep on top of staff compliance and training, it is a great tool. It's easy to use and simple to bring up information and report on it in meetings, which helps to show that you are on top of everything that you need to be.
